

Park Road/River Street Tara Construction 2018

The Municipality of Arran-Elderslie Water & Sewer Department is about to begin the Park Road/River Street water main construction job.

The project is scheduled to begin Monday September 17th, and weather permitting conclude around October 5th. The work includes connecting last year's water main directionally drilled under the river to both River Street and Park Road existing water mains. When completed this line will greatly improve fire protection, pressure, and provide less disruptions to the residences of Tara.

Please be advised that construction in the area could provide inconveniences such as heavy equipment traveling the local streets, reduced accessibility on the street, dust issues, and disruptions in the water service.

Municipal staff will make every effort to advise the residents of disruptions to their services, however there may be isolated instances where this may not be possible.

It is advised that you check your water daily prior to usage. Should you find any discolouration run cold water until the issue is resolved. Please check water prior to doing laundry.

We thank you for your patience and cooperation during these projects. Should you have any concerns or questions please feel free to contact:
